Summary

Computer Science Engineer with experience in MERN and Spring Boot development, cloud deployment on AWS, and mobile app development. Delivered projects in event management and automation, and recognized in multiple hackathons for practical, innovative solutions.

Education

KLS Gogte Institute of Technology — Belagavi, Karnataka
Bachelor of Engineering in Computer Science; CGPA: 9.02 — 2021 to Present

RL PU College of Science — Belagavi, Karnataka
12th Grade; Percentage: 94.33 — 2021

St John's High School — Belagavi, Karnataka
10th Grade; Percentage: 87.2 — 2019

Experience

Esko - Software Engineer Intern — Feb,2025 - Present

- Developed full-stack web applications using the MERN stack and Java Spring Boot, collaborating with cross-functional teams to ensure timely and efficient product delivery. Utilized Git and GitLab for version control and streamlined code management. Experienced with Agile methodologies using Jira and deployed applications on AWS Cloud infrastructure.

Theta Dynamics Pvt. Ltd. - Frontend Developer — Sept, 2024 - Jan, 2025 - Belagavi, Karnataka

- Built and integrated the frontend for **Hirehack** (https://hirehack.io), an AI-powered interview preparation platform, ensuring seamless API communication and a responsive, user-friendly interface.

Projects

AURA Website — **Live Link**

- Developed the official website for AURA, the largest cultural fest in college, using React.js to showcase event details and enable external student registrations. Also built mobile applications using Jetpack Compose and Kotlin for entry, exit, and attendance marking, along with an Admin Dashboard to monitor event statistics and manage student access during concerts.

Avalanche Website — **Live Link**

- Developed "Avalanche" college fest website with a "Pixel Parade" theme. Built with React.js for event displays and registrations, QR-based payments, and a secure Node.js and Express backend, using MongoDB for data management.

Bulk Certificate Generator — **GitHub Link**

- Developed a Bulk Certificate Generator using Spring Boot for the Avalanche event to automate certificate distribution. Users can upload a CSV of participant details and select a certificate template, after which personalized certificates are generated and sent via SMTP email. MongoDB was used for storing templates and participant metadata, enabling efficient and scalable processing

Technical Skills

- **Languages:** Java, HTML, CSS
- **Frameworks:** Spring Boot, React.js, Node.js, Express.js
- **AWS:** EC2, Route 53, EBS, ECS, S3 Bucket, Lambda Functions, DynamoDB
- **Databases:** MySQL, MongoDB, PostgreSQL
- **Containerization:** Docker
- **Developer Tools:** Gradle, Maven, Android Studio, Git, GitHub, Postman, Jenkis
- **UI/UX:** Figma, Canva

Achievements - 7 Hackathon Wins

- **Finalist**: Smart India Hackathon (SIH) – Selected for the national finale
- **1st Place**: PyHack (BelPy Python Communities), Hack-to-Future
- **2nd Place**: Wave 2.0 (Basaveshwar Engineering College, Bagalkot), Aura-2025 Digital Entry System
- **Runner-Up**: TCE Hackathon Idea Bazaar (TCE Gadag), Odyssey Hackathon
