EXPERIENCE

Esko Graphics India Pvt. Ltd. Feb 2025 – Sep 2026
Software Engineer I (joined as intern, converted to full-time) *India*

- Developed and maintained backend services, **REST APIs**, and workflow execution capabilities for Enfocus Switch, a production-grade workflow automation platform, using **Node.js, TypeScript, MongoDB, and SQL**.
- Contributed to an AI-powered **Switch Flow Builder** that converts natural-language requirements into executable workflows using LLM-based element selection, product-context retrieval, graph-based intermediate representations, deterministic validation, and XML generation. Validated **40+ QA requirements**, producing valid workflows for 34 cases and reducing workflow creation time from **6 hours to 25 minutes**.
- Integrated an AI assistant into Switch by implementing **JWT generation**, protected private-key handling, and an in-memory token cache with hash-map lookup and expiry-aware refresh.
- Contributed to a script-execution platform using isolated child processes, **inter-process communication (IPC)**, executor pooling, and process-level fault isolation to improve workflow execution reliability.
- Collaborated with engineering and QA teams to investigate issues, validate fixes, and deliver production-quality software improvements through structured development, testing, and code review.

PROJECTS

FinCore | *Payment Processing & Ledger System* | *Java 21, Spring Boot, PostgreSQL, Redis, Kafka, Docker* | Project Link

- Built a **payment processing system** with a **double-entry ledger**, sustaining approximately **1,000 payments/s at 87 ms p95 latency** with zero errors in k6 load tests; verified ledger consistency across **211K+ payments**.
- Enforced payment idempotency and prevented account overdrafts using **idempotency keys and DB row locking**. Under a 50-user concurrent debit test, rejected all **11,885 over-limit payment attempts** without an overdraft.
- Implemented reliable Kafka event publication using the **transactional outbox pattern**, retries, and duplicate-safe consumers. Optimized the event relay through pipelined sends, increasing measured throughput from **133 to 2,800+ events/s**.
- Developed a web-based operational dashboard using **React and Vite** to visualize payment activity, transaction statuses, account balances, and ledger entries through backend REST APIs.

TECHNICAL SKILLS

Languages: Java, TypeScript, SQL
Frontend: React, Vite, HTML, CSS
Backend: Spring Boot, Node.js, Express.js, REST APIs, JWT Authentication
Databases: PostgreSQL, MongoDB, Redis
Messaging: Apache Kafka, Event-Driven Architecture
AI Integration: RAG, Embeddings, LLM API Integration
Testing: JUnit, Mockito
Tools & Cloud: AWS, Docker, Git, GitHub, CI/CD
Core Concepts: OOP, SOLID Principles, Design Patterns, Data Structures & Algorithms, System Design

CERTIFICATIONS

- Getting Started with Generative AI – IBM SkillsBuild
- Java Data Structures & Algorithms – Udemy
- Design Patterns & SOLID Design Principles – Udemy
- Amazon Web Services (AWS) – O'Reilly

EDUCATION

KLS Gogte Institute of Technology 2021 – 2025
Bachelor of Engineering in Computer Science and Engineering *Belagavi, Karnataka*

- **CGPA: 9.02/10**

ACHIEVEMENTS

- Won **7 hackathons** through rapid prototyping, software development, and collaborative problem-solving.
- Received a **Top Honorable Mention** at Esko's Innovation Day for the AI-assisted Enfocus Switch Flow Builder.
